

TECHNOLOGY.TRANSSPARENT.

Dear Sir/Madam,

HORN Technology Days will be taking place for the seventh time next year, this time with a focus on transparency. The event will be held from 5 to 7 June 2019 and will provide extensive insights into Paul Horn GmbH – from the production of our tools to the overall value chain and demonstrations of the tools in action.

Together with over 50 exhibitors from a huge range of manufacturing fields, we are offering you the chance to experience transparency at HORN. Attend our specialist talks and see our tools in action in our live demonstrations. We will be machining numerous components and show parts on various grooving and milling machines in order to illustrate the versatility and exceptional performance of HORN tools. In our exhibition,

we will be looking at the subjects of digitisation and additive manufacturing and demonstrating what the future has in store for us in these areas.

We also have reason to celebrate: HORN is turning 50. We will be marking our 50th anniversary as part of the Technology Days. As well as looking back at half a century of company history, we will also be looking ahead to the future.

You can register for the event now.

We look forward to welcoming you to Tübingen soon!

Lothar Horn

Managing Director

Markus Horn

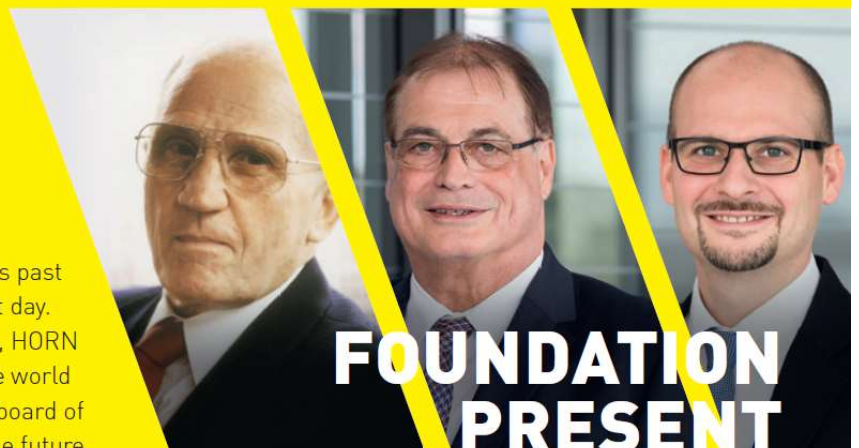

Managing Director

**50
YEARS**

HORN TOOLS

SINCE
1969

Since its foundation in 1969 by Paul Horn, HORN's past has been a success story – right up to the present day. Since 1995, under the leadership of Lothar Horn, HORN has been able to expand its leading position in the world market. And Markus Horn's appointment to the board of directors in 2018 has already set the course for the future.

FUTURE**

PROGRAMME

There are eight exciting technical presentations and live demonstrations waiting for you. We're throwing open the doors of our production area. Come and talk to our partner companies and learn about the current technologies involved in the production and processing of precision tools.

Our carbide manufacturing facility is also open for visits. Come and discover our state-of-the-art systems for the manufacture of carbides, as well as various manufacturing processes from axial pressing to extrusion.
